Mr. Bruce E. Blowey
Engineer of Generation - External
LADWP
P.O. Box 111, Room 1255E
Los Angeles, CA 90051

Dear Mr. Blowey:

Coal Burner Condition and Estimated Remaining Life Report

Please find enclosed one original and three copies of the 'Coal Burner Condition and Estimated Remaining Life Evaluation' Report for the Intermountain Generating Station.

This report was prepared at our request by Energy & Environmental Research (EER). We hope it provides added insight regarding the existing condition and estimated life expectancy of the IGS burners. EER is considered to be one of the best sources for critique of Babcock & Wilcox (B&W) equipment.

We invite further discussion on any of the associated topics or findings within the report. Please direct questions and comments to Mr. James Nelson at (801) 864-4414 Extension 6464, or Mr. Aaron Nissen at (801) 864-4414 Extension 6482.

Sincerely,

S. Gale Chapman/R.L. Davis
